

Llantarnam

Client: Private Owner • System: Wall System 2 • Material: Silicone Render, EPS
Sector: Refurbishment, Low Rise

The Objective

This private refurbishment project, completed in stages from July 2013 to its completion in 2015, has provided the homeowner with a warm, attractive and eye-catching property.

The customer looked to improve the aesthetics of the property with a modern smooth render finish to replace the tired roughcast look of the existing façade.

It was also hugely important to them to have an energy efficient home, to warm the property and prevent any water ingress without the hassle and potential issues faced traditionally by removing and rendering their property.

The external wall insulation was carried out to the customers delight by our well-established and approved render and EWI installers Plastercraft using our EWI system with a Granosil KR 1.5mm finish.

The Challenges

The outside of the property was a little run down, very cold and in need of TLC and also suffered from some damp and water ingress.

Our EWI with silicone finish offered a complete solution to all of the customer's needs as well as successfully combating all of the project's objectives.

The Benefits

The customer now benefits from a warmer and eye pleasing property that adds value to their home and are extremely pleased with the finished work and happy that cold and water issues are resolved for their future enjoyment of their home.

CPD events available
