

rev. 2018

Interior application

1. Swisspearl panels have primarily been designed for exterior use on so called rain screen or rear ventilated facade applications.
2. However Swisspearl panels are by all means suitable for all kinds of interior applications in public or private buildings.
3. Swisspearl panels are not suitable to be used in areas with exposure to mechanical impact, i.e. wear and tear on panel surface, including frequent cleaning procedures.
The panels are not suitable to be used as:
 - Flooring material
 - Cladding to wet rooms like toilets, change rooms, etc.
 - Kitchen tops
 - Surrounding to open fire places
4. Ventilation void behind panel is not required per se, whereas it is still recommended to install the panels onto profiles or battens that can be shimmed to provide plumb and aligned panel supports.
5. Particular attention shall be paid to the wall base detail; as it is exposed to mechanical impact by the building users and by cleaning equipment. Therefore it is recommended to install substantial base boards.
6. Attention shall be paid furthermore to lower wall sections in heavy duty areas in airports, shopping centers, hotels, etc. where the lower wall section is exposed to mechanical impact by shopping trolleys, luggage, etc. Here the use of protective rails or alternative material with increased impact resistance will be indicated.
